

327 SEWARD

Statement of Compatibility

The proposed structure for 327 Seward (ADU) will blend nicely into the urban fabric that is Lyons. Utilizing traditional rooflines, the two buildings will be juxtapose to one another to create architectural interest, and define uses within. One clad with grey, vertical-wood siding; And the other with contemporary Corten Steel. The panels will be smooth, and only the fasteners and seams will be visible. The rusted patina that will emerge will blend nicely into the natural red sandstone environment. Alternatively, it will contrast against the neutral grey, which picks elements from the surrounding urban fabric. With this submission, we hope to create a unique and appropriate piece of architecture for the town.

327 SEWARD
