Subject: Sustainable Building Practices
Date: Thursday, February 27, 2020 11:09:40 AM

Hello Paul,

I hope you are feeling better! I'd like to better understand the current building codes for new buildings and determine opportunities for increased sustainability building practices.

For the affordable housing development, I have the presentation that was held on March 12, 2018 ([link](#)). Is there updated documentation that provides more information on sustainable building practices?

The March 12th presentation mentions community garden and enterprise green community standards. Is the builder needing to obtain the Enterprise Green Community Standards? I would like to learn whether any of the items below has been incorporated into the building design?

- Passive solar design
- Energy efficient HVAC and lighting
- Rooftop solar
- EV readiness
- Bike racks

Thanks,
Garrett
