RE: **Lyons River Valley Park – Aeration Installation**

Dear Dave Cosgrove:

EcoResource Solutions (ERS) was contracted to install two aeration systems to the Lyons River Valley Park ponds in an effort to manage and eliminate algae blooms during the summer months. The project was set to be completed by October 31, 2021. As of now, electrical work has been completed and all that remains is the installation of the aeration systems to each pond. On October 22, 2021, Project Manager Jack Pritchett tested positive for Covid-19. Similarly, on October 26, 2021 a number of the ERS team also tested positive for Covid-19. Due to this unforeseen situation, the ERS team has gone into a mandatory 10-day quarantine, as per CDC guidelines, which will delay the final installation to the system to the first or second week in November. ERS maintains that installation will be completed by this time, and will have the systems up and running this year for your final inspection prior to “winterizing” for the season.

We appreciate your understanding and flexibility and apologize for any inconvenience this may cause.

Sincerely,

ECORESOURCE SOLUTIONS, INC.

Jack Pritchett
